

Multiheads K2

photo: Multiheads K2

Complete system with independent heads and positioning based on length with magazine loader. Included with single chains with photocell sensor to avoid the surcharge of the tubes.

The tubes of the loader chest are being taken from the system that with its movement will provide to feed simultaneous the stations of the multiheads.

The automatic unloading process happens in a container controlled by a motoriducer, for silence these containers are being positioned based on the length of the tube cut.

The characteristics of the multiheads are personalised on the customer's request.

- Characteristics of the model in the picture:
- Round tubes diameter 10-100 mm (on demand head version for bigger diameters)
- Tubes 10x10 up to 65x65 mm / 15x10 up to 100x60mm
- Thickness tubes 1-5 mm (on demand reinforced head for bigger thicknesses)
- Length tubes 4000-8000mm
- Length tubes double cut 340-8000mm
- Straight line required max 1 mm/m
- Head rotation variable speed
- Blade diameter from 270 up to 350mm
- Motor blade 3,3Kw

Available the version with automatic position of the cutting heads by the measure of the tube.

K2 with 6 heads (5.5 MB)
